

iBook Installation Instructions

Step 1:

Remove the 4 screws from the sides of the display cover using a hex key or torx screwdriver.

Step 2:

Grab the back of the display cover and gently pry it up with your fingers. The case should unsnap in this location. Carefully unsnap the rest of the case by working your way around the sides, still prying with your fingers.

Step 3:

Place the removed cover upside down on a flat surface.

Step 4:

Fasten the insert in place with a few pieces of tape, making sure it is lined up and where you want it to be.

Step 5:

Carefully snap the cover back in place, and replace the screws. Do not over tighten the screws. If you do, you will notice the plastic will bend under the stress. Tighten only until the plastic barely starts to bend.
